Patent No. 6551795
GENERAL INFORMATION:
APPLICANT: MATC J. Rubenfield et al.
APPLICANT: MATC J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT APPLICATION NUMBER: US 60/074,788
FRIOR APPLICATION NUMBER: US 60/074,788
FRIOR RILING DATE: 1998-02-18
FRIOR FILING DATE: 1998-02-18
FRIOR FILING DATE: 1998-02-18
FRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 889
LEGGTH: 1944
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    APPLICANT: Charles Kunsch
TITLE OF INVENTION: Streptococcus pneumoniae Polynucleotides and Sequences
WIMBER OF SEQUENCES: 391

epithelium was carefully dissected out of the modiolus.
Total RNA was extracted using the micro Fasttrack kit
(catalog # K1591-02; Invitrogen, Catlabad, CA), according
to manufacturer's instructions. Reverse transcription and
library construction were carried out with the Uni-Zap XR
Giagapack III Gald Cloning kit (catalog # 237612), both
from Stratagene (La Jolla, CA, USA), according to
manufacturer's instructions. Briefly: 1.5 ug mRNA was
reverse transcribed using a hybrid oligo(dT) linker-primer
that contains an Xho I site. First strand synthesis was
primed with the linker-primer severse transcribed using
Moloney murine leukemia virus reverse transcribed using
Moloney murine leukemia virus reverse transcribed using
with Xho I. The cDNA was sequentially size fractionated
over Pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden)
and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA)
and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA)
columns to enrich for CDNA spracter than 400bp and 1000 bp
, respectively. The CDNA was then directionally ligated to
the Uni-ZAP XR vector, which had been predigested with
EcoR I and Xho I. The phagemid was packaged with Gial and, upon Itration on XLI Blue MRF' cells, the
yield of the phage library was estimated to be 11,100,000
rescue plasmid DNA from the phages. Upon plating of the
resistance helper phage (E ExAssist Interference
resistance helper phage (Saturated culture with the
grown in 96-well, Z ml growth plate. Plasmid DNA was sinstructed culture. Step
concerts of (TM) plasmid puring reverse penerated with the
the S' end of the cDNA clones were generated with the
tuiversal M13 reverse primer (GAGGAAAGCTMAGCC) and 25%
strandth Rights for EDNA clones were generated with the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   strength BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on M7 Tetrad thermal cyclers (MM Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POPS polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have I copy; 14.3% 2; 12% 3-10;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 23% have hits in GenBank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified." 83 c 135 g 127 t

/ clone_lib="Mouse Organ of Corti cDNA pBluescript"
/ clone_lib="Mouse Organ of Corti; Vector: pBluescript; The
organ of Corti; (OC) was fine dissected from a total of 386
OC as follows: 102 samples from post-natal (P) day 5; 72
from PG: 60 from P7; 46 from P8; 18 from P9; 20 from P10;
14 from P12 and 24 from P13. After killing animals by
cervical dislocation followed by decapitation, the bulla
was removed and opened in Leibowitz medium. The bony
capsule of the cochlea was chipped away, stria vascularis
and spiral ligament were removed and the sensory
epithelium was carefully dissected out of the modiolus.
Total RNA was extracted using the micro Fastrack kit
(catalog # K1593-02; Invitrogen, Carlsbad, CA), according
to manufacturer's instructions. Reverse transcription and
library construction were carried out with the Uni-Zap XR
vector kit (catalog # 237211, Stratagene) and Uni-Zap XR
digapack III Gold Cloning kit (catalog # 237212), both
from Stratagene (La Jolla, CA, USA), according to
manufacturer's instructions. Briefly: 1.5 ug mRNA was
reverse transcribed using a hybrid oligo (df) linker-primer
reverse transcribed using a hybrid oligo (df) linker-primer

First strand synthesis was primed with the linker- primer and transcribed using Moloney murine lunker- primer and transcribtase (MMLV-RT) and 5-methyl dCTP. The second strand was synthesized with DNA polymerase and RNase H. Complementary DNA was blunt ended with Fth DNA polymerase, ligated with ECOR I adapters in the presence of ligase and digested with Xho I. The cDNA was sequentially size fractionated

               over Pharmacia Size Sept00 (Planmacia, Oppsain, Sweden) and Clontecch Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for CDNAs greater than 400pp and 1000 by respectively. The CDNA was then directionally ligated to the Uni-2DP XR vector, which had been predigested with EcoR I and Xho I. The phagemid was packaged with digapak III Gold and, upon titration on XII Blue NRF cells, the yield of the phage library was estimated to be 11.00,000 recombinants. Stratagene's Exhasist Interference resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescued library, individual cDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the concert96 (TM) plasmid purification kit (Invitrogen, Carlsbad, CA) as instructed by the manufacturer. ESTF from the 5' end of the CDNA clones were generated with the universal M13 reverse primer (CAGGAAACAGCTATGACC) and 25% strength Baggoye terminator sequencing rematery (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on MJ Tetrad thermal cyclers (MJ Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POPS polymer (Applied Biosystems, Foster City, CA).

The frequency distribution of the library is as follows: 72% of genes have I copy; 14.3% 2; 12% 3.10; 1.4% 11-50 and 0.1% 51-160. As to gene function, 45% of genes are present in GenBank and have know function; 12% have uncharacterized ESTs and 20% are unidentified."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   181 AAGAAAGGGCAGCAGATCTATGTTTACTCCAAGCTGGTAACAGAAAACGGAGCTGGAGG 240

FEATURES

```
Strength BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on MT Terrad thermal cyclers (MA Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POP5 polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have 1 copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 23% have hits in GenBank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BQ569741 560 bp mRNA linear EST 19-JUN-2002 gil35f01.yl Mouse Organ of Corti cDNA pBluescript Mus musculus cDNA clone gil35f01 5', mRNA sequence.

```

and spiral ligament were removed and the sensory epithelium was carefully dissected out of the modiolus. Total TNA, was extracted using the micro Fastrack kit (catalog # K1593.02; Invitrogen, Carlsbad, CA), according to manufacturer's instructions. Reverse transcription and library construction were carried out with the Uni-Zap XR digapack III Gold Cloning kit (catalog # 237612), both from Stratagene (La Jolla, CA, USA), according to manufacturer's instructions. Briefly: 1.5 ug mRNA was reverse transcribed using a hybrid oligo(dT) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker- primer and transcribed using Moloney mutine leukemia virus reverse transcribed using Moloney mutine leukemia virus reverse transcribed using Moloney mutine leukemia virus reverse transcribed using Moloney mutine leukemia virus reverse transcribed using Moloney mutine leukemia virus reverse transcribed using Moloney mutine leukemia virus reverse transcribed using Moloney mutine leukemia virus reverse transcribed using Moloney mutine leukemia virus reverse transcribed using Moloney mutine leukemia virus reverse transcribed using Moloney mutine leukemia virus reverse transcribed using Moloney mutine leukemia virus reverse transcribed using over Pharmacia Size Sep400 (Bharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for CDNA was then directionally ligated to the Uni-ZAP XR vector, which had been predigested with Gold pot the Uni-ZAP XR vector, which had been predigested virus greater than 400bp and 1000 by respectively. The CDNA was then directionally ligated to the phage library was estimated to be 11,100,000 recombinants: Stratagener's Exatagener's Stratagener's Strat strength BigDye terminator sequencing chemistry (Applied Biosystems). Foster City, CA). Sequencing reactions were performed on MJ Tetrad thermal cyclers (MJ Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POP5 polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have 1 copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in Genbank and have know function; 23% have hits in GenBank, but do not have assigned function; 12% are uncharacterized ETS and 20% are unidentified."

Briefly: 1.5 up RRNA was reverse transcribed using a hybrid oligo(dT) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker. Primer and transcribed using Moloney mutine leukemia virus reverse transcribed wing Moloney mutine leukemia virus reverse transcribeds (MMLV-RT) and 5-methyl dCTP. The second strand was
                                                                                                                                                                                                                                                                                                                                                                                       630 bp mRNA linear EST 19-JUN-2002

with Xho I. The cDNA was sequentially size fractionated over Pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin.1000 (Clontech, Palo Alto, CA) columns to enrich for cDNA greater than 400hp and 1000 bp, respectively. The cDNA was then directionally ligated to the Uni-ZAP XR vector, which had been predigested with EcoR I and Xho I. The phagemid was packaged with Gigapak III Gold and, upon titration on XLI Blue MRF cells, the yield of the phage library was estimated to be 11,100,000 recombinants. Stratagene's Exassist Interference resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescued library, individual cDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the Concert96(TM) plasmid purification kit (Invitrogen, Carlsbad, CA) as instructed by the manufacturer. ESTs from the 5' end of the CDNA clones were generated with the universal M13 reverse primer (CAGGAAACGCTARGCC) and 25%
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BB611549 RIKEN full-length enriched, 13 days embryo head Mus musculus cDNA clone 3110083012 5', mRNA sequence.

was removed and opened in Leibowitz medium. The bony capsule of the cochlea was chipped away, stria vascularis and spiral ligament were removed and the sensory epithelium was carefully dissected out of the modiolus. Total RNA was extracted using the micro Fastrack kit (catalog # X159-02; Invitrogen, Carlsbad, CA), according to manufacturer's instructions. Reverse transcription and library construction were carried out with the Uni-Zap XR vector kit (catalog # 237211, Stratagene) and Uni-Zap XR digapack III Gold Cloning kit (catalog # 237512), both from Stratagene (La Jolla, CA, USA), according to

Extremely BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on MJ Tetrad thermal cyclers (MJ Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POPS polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have I copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 43% have hits in GenBank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       178 9

14 from P12 and 24 from P13. After Killing alminals by cervical dislocation followed by decapitation, the bulla was removed and opened in Leibowitz medium. The bony capsule of the cochlea was chipped away, stria vascularis and spiral ligament were removed and the sensory epithelium was cartacted using the micro Fastrack Mit (ctalog # K153-02; Invitrogen, Carlsbad, CA), according to manufacturer's instructions. Reverse transcription and library construction were carried out with the Uni-Zap KR vector kit (ctalog # 237211, Stratagene) and Uni-Zap KR vector kit (ctalog # 237211, Stratagene) and Uni-Zap KR vector kit (ctalog # 237211, Stratagene) and Uni-Zap KR vector kit (ctalog # 237211, Stratagene) and Uni-Zap KR vector kit (ctalog # 237211, Stratagene) and Uni-Zap KR vector kit (ctalog # 237211, Stratagene) and Uni-Zap KR vector kit (ctalog # 237211, both from Stratagene (La Jolla, CA, USA), according to manufacturer's instructions. Briefly: 1.5 up mRNA was reverse transcribed using a hybrid oligo(dT) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker- primer and transcribed using synthesized with DNA polymerase and RNASE H. Complementary DNA was blunt ended with Ptu DNA polymerase and digested with DNA was blunt ended with Ptu DNA polymerase and digested with Ecox I adapters in the presence of ligase and digested vith Xho I. The CDNA was steader than 400bp and 1000 by columns to enrich for CDNAS greater than 400bp and 1000 by columns to enrich for CDNAS greater than 400bp and 1000 the Uni-ZAP XR vector, which had been predigested with Ecox I and Xho I. The phagemid was packaged with Gagapak III Gold and mon titrafon on XI, Blue MRF, cells, the

recombinants. Stratagene's Exhssist Interference resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescued library, individual cDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the concerty6 (TM) plasmid purification kit (Invitrogen, Carlebad, CA) as instructed by the manufacturer. ESTs from the 5' end of the cDNA clones were generated with the universal M13 reverse primer (CAGGAACAGCTATGACC) and 25% strength BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on M1 Tetrad thermal cyclers (MJ Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POPS polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have 1 copy, 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 23% have hits in GenBank, but do not have assigned function; 12% are unharacterized ESTs and 20% are unidentified."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          EST 19-JUN-2002

/clone lib="Mouse Organ of Corti; Vector: pBluescript; The
organ of Corti (OC) was fine dissected from a total of 386
OC as follows: 102 samples from post-natal (P) day 5; 72
from P12 and 24 from P13. After Killing animals by
oervical dislocation followed by decapitation, the bulla
was removed and opened in Leibowitz medium. The bony
capsule of the cochlea was chipped away, stria vascularis
and spiral ligament were removed and the sensory
epithelium was carefully dissected out of the modiolus.
Total RNA was extracted using the micro Fastrack kit
(catalog # X1593-02; Invittogen, Carlsbad, CA), according
to manufacturer's instructions. Reverse transcription and
library construction were carried out with the Uni-Zap XR
vector kit (catalog # 237211, Stratagene) and Uni-Zap XR
digapack III Gold Cloning kit (catalog # 237612), both
from Stratagene (Ita Jolla, CA, USA), according to manufacturer's instructions. Briefly: 1.5 ug mRNA was
reverse transcribed using a hybrid oligo(dT) linker-primer
that contains an Xho I site. First strand synthesis was
primed with the linker- primer and transcribed using
Moloney murine leukemia virus reverse transcribeds
(MMLV-RT) and 5-methyl dCTP. The second strand was
                                                                                                                                                                                                                                                                                                                                                                                                                               BQ567343 604 bp mRNA linear EST 19-JUN-2002 gi88d08.yl Mouse Organ of Corti cDNA pBluescript Mus musculus cDNA clone gi88d08 5', mRNA sequence.

synthesized with DNA polymerase and RNase H. Complementary DNA was blunt ended with Pfu DNA polymerase, ligated with EcoR I adapters in the presence of ligase and digested with Xho I. The cDNA was sequentially size fractionated over Pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Pala Alto, CA) columns to enrich for CDNA greater than 400bp and 100b by respectively. The CDNA was then directionally ligated to the Uni-ZAP XR vector, which had been predigested with EcoR I and Xho I. The phagemid was packaged with Giappak III Gold and, upon Litration on XLI Blue MRF' cells, the yield of the phage library was estimated to be 11,100,000 resouce helper phage (catalogue # 21120) was adopted to resistance helper phage (catalogue # 21120) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescued library, individual CDNA clones were selected and grown in 96-well, and growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the concerts (TM) plasmid purification kit (Invitrogen, Carlabad, CA) as instructed by the manufacturer. ESTs from the 5' end of the cDNA clones were generated with the universal NI3 reverse primer (CAGGAAACAGCTATGACC) and 25 strength BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on MJ Tetrad thermal cyclers (MJ Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POPS polymer (Applied Biosystems, Foster City, CA).

Sequencers using POPS polymer (Applied Biosystems, Foster City, CA). Sequencing reactions as follows: 72% of genes have 1 copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank, but do not have assigned tuction; 12% are unharacterized ESTs and 20% are unidentified.

epithelium was carefully dissected out or the modification and rotal RNA was extracted using the micro Fastrack Kit (catalog # K1593-02; Invitrogen, Carlabad, CA), according to manufacturer's instructions. Reverse transcription and library construction were carried out with the Uni-Zap XR Gigapack III Gold Cloning Kit (catalog # 23761), both from Stratagene (La Jolla, CA, USA), according to manufacturer's instructions. Briefly: 1.5 ug mRNA was reverse transcribed using a hybrid oligo(dT) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker- primer and transcribed using Moloney murine leukemia virus reverse transcriptuse (MMLV-RT) and 5-methyl GTP. The second strand was synthesized with DNA polymerase and RNase H. Complementary DNA was blunt ended with Pfu DNA polymerase, ligated with EcoR I adapters in the presence of ligase and digested with Aho I. The cDNA was sequentially size fractionated over Pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for cDNA was then directionally ligated to the Uni-Zap XR vector, which had been predigested with EcoR I and Xho I. The bhagemid was packaged with Gigapak III Gold and, upon titration on XLI Blue MRF' cells, the Yello of the phage library was estimated to be 11,100,000 recombinants. Stratagene's ExAssist Interference resistance helper phage (catalogue # 211203) was adopted to rescued library, individual cDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of seturated culture with the Concert of Parcer of Murin Process
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /dev stage="Post natal day 5 to 13"
/clone lib="Mouse Organ of Corti cDNA pBluescript"
/clone lib="Mouse Organ of Corti cDNA pBluescript; The
/note="Organ: Organ of Corti; Vector: pBluescript; The
organ of Corti (OC) was fine dissected from a total of 386
OC as follows: 102 samples from post-natal (P) day 5; 72
from P6; 60 from P7; 46 from P8; 18 from P9; 20 from P10;
from P6; 60 from P7; 46 from P8; 18 from P9; 20 from P10;
from P12 and 24 from P13. After killing animals by
cervical dislocation followed by decapitation, the bulla
was removed and opened in Leibowitz medium. The bony
capsule of the cochlea was chipped away, stria vascularis
and spiral ligament were removed and the sensory
epithelium was carefully dissected out of the modiolus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Concert96(TM) plasmid purification kit (Invitrogen, Carlsbad, CA) as instructed by the manufacturer. ESTs from the 5' end of the CDNA clones were generated with the universal M13 reverse primer (CAGGAAACAGCTATGACC) and 25*
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                strength BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on MJ Tetrach thermal cyclers (MJ Research, Waltbam, MA), and analyzed on 3700 automated capillary

                                                                                                                                   The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.
